

## Guide to Presenting & Submitting Your Pi Project

### Presentation Information

Your projects are graded via a presentation during your lab session. All advanced CIT courses have lab reports which contain a background section, as well as procedures, results, conclusions, and troubleshooting sections.

### Presentation Format

**A reminder of what your presentation should discuss and approximate timing guidelines:**

1. The rationale for the project (business case) - approximately 30 seconds
2. The connection to the Raspberry Pi architecture of your project - approximately 3 minutes
3. The procedures you followed - 2 minutes
4. The results (i.e. demonstrate functionality and show us on video that it works) 2 minutes (maybe less if the project does not work)
5. Your troubleshooting - 2 minutes (maybe longer if the project does not work)
6. Lessons learned (what would you do differently in the future) 30 seconds

The time guidelines suggest the presentation should be about 10 minutes in length. It can go over if needed, but not by more than 1 minute.

**ALL MEMBERS OF YOUR PROJECT TEAM MUST PRESENT THE PROJECT.**

You may decide on how you want to split the presentation topics amongst yourselves.

The final presentation slides are due for everyone (all lab sections) on Friday December 2nd, 2022 at 11:59 pm.
