

Group Number	8
Group Members:	Paul Amado, Andrew Burzynski, Arnav Surve, Leo Ye
PoV Problem Statement	Smaller, recreationally focused clubs need more accessible funding for club activities on campus or major events, by hosting fun events that can create income, because they are constantly underfunded and overshadowed by the needs of bigger clubs on campus.

Critique

	What specific feedback did your team receive from your peers? (this can be the same for each member of the group)
1	"I like applying the girl scout cookie model to university clubs, but it's not a very innovative idea."
2	"Does it advertise specific clubs?"
3	"Large time investment, would be hard for busy students to participate"
	<p><u>Self Reflection</u> - Now that Project 2 is complete and the final project is going to start, you should reflect holistically on your successes and challenges. Answer the following questions:</p> <ol style="list-style-type: none">1. Which element(s) of design thinking do you believe you perform really well? Why do you believe that? I believe I perform well at the collaborative aspect of design thinking as well as iterating over my ideas. I am comfortable taking diverse perspectives into consideration, and specifically having a "flat" team hierarchy. In addition, refining preexisting ideas is something I have experience with.2. Which element(s) of design thinking do you believe you could improve on? Why do you believe that?

I could improve on the human centered element of design thinking. In order to do this, I could put more effort into researching and understanding my target use case audience.

3. What team working skills do you feel like you need to improve on? How do you intend to improve those skills?
A team working skill I need to improve on would be being better at critical thinking for making decisions for the team. I tend to just go along with whatever the team wants to do.
4. What team working skills do you feel like you need to keep the same? How do you intend to keep yourself accountable?
I feel I should continue the level I am at with collaboration. Taking every team member's perspective into consideration is something I am good at.
5. Do you believe that you created an innovative solution? Why do you believe that?
Initially, I thought the idea was innovative as it incorporated previous fundraising methods in a new context (clubs).
6. If you could redo the project, how would you do it differently?
If I could redo the project I would choose a different focus for the solution that doesn't concern clubs.
7. Now that you've practiced developing a "design thinkers mentality", what else do you hope to learn? What is still confusing to you?
I hope to further my prototyping skills, and specifically my ability to iterate over ideas to make them objectively better or more useful.

Consider the phases of design thinking. Rate your comfort level in being able to apply those elements in a different design context with different group members (1 - not comfortable/need help, 5 - very comfortable/I'm a pro)
